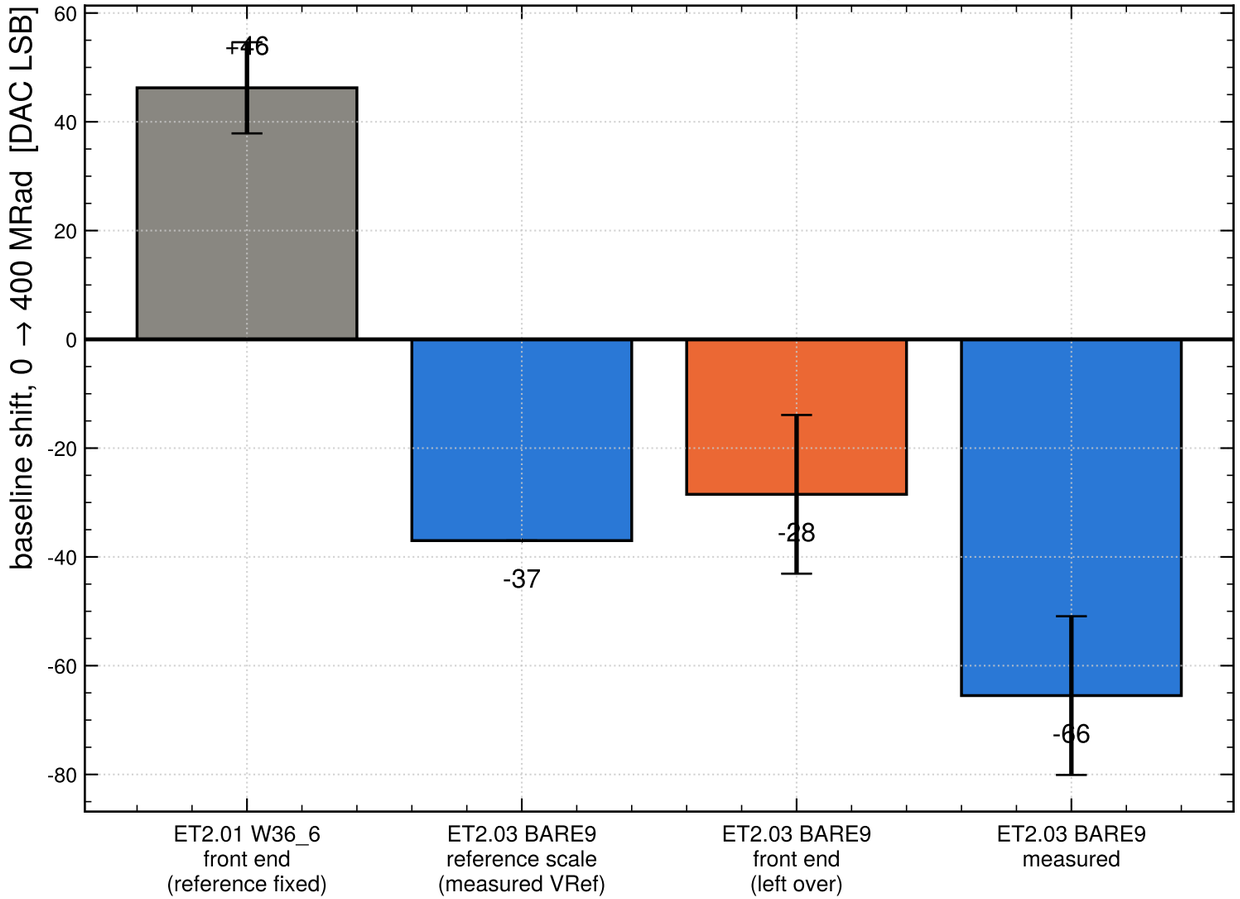
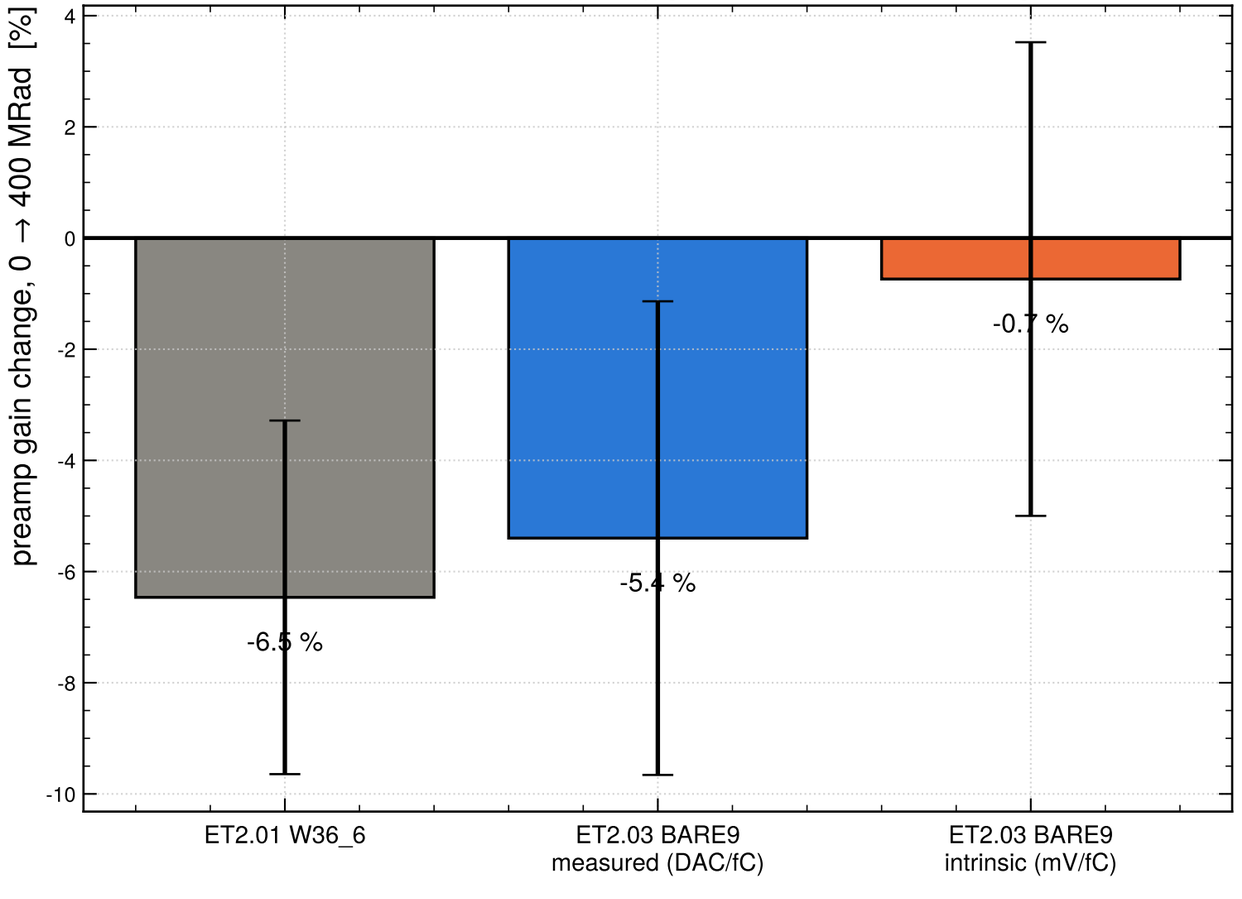
The measured reference rise, applied
ET2p03_BARE9 VRef +4.7 % over 0 → 400 MRad (notebook 03 §15); decomposition assumes DAC full scale proportional to VRef; ET2p01_W36_6 on a fixed external reference
ET2.01 and ET2.03, January and August 2024

the reference explains half of the ET2.03 fall; the front ends still disagree in sign





after the reference correction the ET2.03 preamp gain is consistent with unchanged
