Auxiliary: the low-voltage rails
ET2p01_Bar4 hybrid; PowerHistory_v2, 233 576 samples, 2024-01-12 to 01-19
CERN climate chamber, January 2024

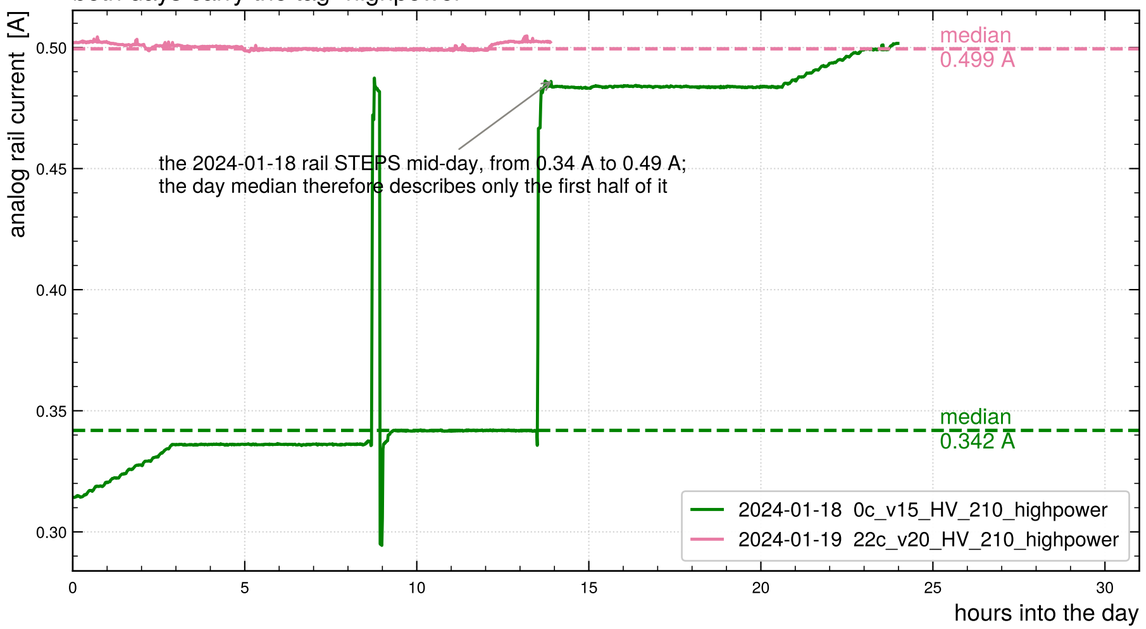

the rails are stable to a few mV over the whole week

the analog current is not: the two shaded days differ by 46 %

both days carry the tag `highpower`

reported, not explained
